

MANUAL QA ENGINEER

I have been working in the QA area for more than eight years for now. During that time I was involved in a few projects and educational programs at previous companies. As a QA Engineer, I have worked on long-term and on short-term projects. I have carried out requirements management, functional specification development, test design and test cases development, software testing, project and testing estimation, software quality measurements.

I have considerable experience in Functional and Non-Functional Testing while using different testing types and tools during Fundamental Test Process on each project.

I am well-versed in QA processes setup, testing techniques and methodologies, managing test documentation.
